

The APQS Bliss™ track system

Bliss – it’s the only word we could find that could possibly describe that effortless feeling you’ll get when you quilt with our exclusive track system.

The Bliss™ track system dramatically reduces friction and increases ease of movement. Combine this with an APQS lightweight quilting head and you’ll feel like you’re gliding across your quilt.

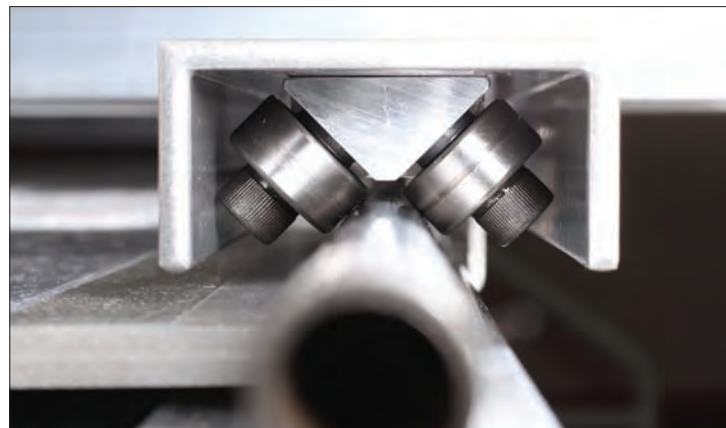

To create the Bliss™ track system, our engineers used movement technology, a type of technology that revolutionized everything from aerospace engineering to medical instruments and robotics. You won’t find anything else like this in the quilting industry!

Specially-designed horizontal wheels on the sewing head and roller bearings on the table rails eliminate binding and resistance. Quilt artists, longarm professionals and hobby quilters alike will appreciate the increased accuracy and control gained from the Bliss™ track system.

Our exclusive Bliss™ track system is easy to maintain. Unlike other channel systems on the market, the APQS rail profile prevents dirt and thread buildup so you can spend more time quilting and less time cleaning. No adjustments are needed – all you have to do is quilt! This technology can be added to the Millennium, Freedom, Lucey and Lenni sewing heads.

The Bliss™ track system dramatically reduces friction and increases ease of movement.

QUILT EASIER.
QUILT INSPIRED.
